### **DETAILED ACTION**

Page 2

## Response to Arguments

Applicant's arguments filed 12/07/05 have been fully considered.

Regarding the rejection in view of Havey, applicant argues that Havey fails to teach combining multiple sensors together. The Examiner disagrees and notes that claim 22 merely lists different sensors; it is unclear why multiple sensors collectively cannot be termed "an apparatus"; there is no claimed element physically connecting them. The Examiner notes page 13 of Havey stating, "[m]easuring wearing compliance in an orthosis requires the use of a transducer or **combination of transducers**".

Applicant's amendments overcame the rejection under 35 U.S.C. 102(b) as being anticipated by Mak (State-of-the-art research in lower-limb prosthetic biomechanics-socket interface).

### Claim Rejections - 35 USC § 102

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Application/Control Number: 10/699,720 Page 3

Art Unit: 3738

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 22, 24-26 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Havey (Methodology-Measurements, Part II, Instrumentation and Apparatus, (applicant submitted).

Havey teaches an apparatus for a socket (see page 2, at least "*Transducer Applications for Orthoses and Prosthesis*" including the teaching "socket pressure") comprising:

at least one of a pressure sensor (see page 10, paragraph 9, teaching "pressure transducer.. in a prosthetic socket") and a force sensor;

at least one of a temperature sensor and a moisture sensor; and a means for indicating values sensed by at least one of the pressure sensor, force sensor, temperature and moisture sensor; see all sections of "Signal Conditioning/Amplification.

## in the alternative, under 35 U.S.C. 103(a)

Page 13 of Havey teaches, "[m]easuring wearing compliance in an orthosis requires the use of a transducer or combination of transducers". It would have been obvious to one having ordinary skill in the art to have used in combination, all transducers taught to fully monitor the orthosis or prostheses to improve wearer comfort.

Additionally, claim 22 does not positively claim a socket and the preamble fails to breathe any life or meaning into the body of the claim.

Regarding claim 25, "alarm means" is broad, a high reading on a strip chart or oscilloscope will fulfill the language.

# Allowable Subject Matter

Claims 1-6, 8-21, 27-29, 31-39 are allowed.

#### Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Art Unit: 3738

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bruce E. Snow whose telephone number is (571) 272-4759. The examiner can normally be reached on Mon-Thurs.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Corrine McDermott can be reached on (571) 272-4754. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
